

## **Carriage of Lithium Battery Powered Small "Vehicles" by Passengers**

The acceptance of small vehicles that are powered by lithium ion batteries in passenger checked and/or carry-on baggage is prohibited onboard EL AL flights.

The above applies only when batteries are installed in the vehicle and cannot be removed.

If the batteries are removed, it may be carried in carry-on baggage only provided -

- Battery is packed in original retail packaging or by otherwise insulating terminals, e.g. by taping over exposed terminals or placing each battery in a separate plastic bag or protective pouch.
- Battery does not exceed 160 Wh
- No more than 2 batteries per passenger.

\* Most airports implemented a total prohibition on the carriage of these small vehicles, even when removing the batteries

Examples of these small lithium battery-powered vehicles are - Air-Wheel, Solo-Wheel, Hover-Board, Mini-Segway and Balance Wheel.

With the above said, EL AL joins other airlines who have implemented a total prohibition on the carriage of small vehicles in passenger baggage. EL AL is not responsible for transported items that do not comply with the guidelines. It is recommended to insure such items privately.
